Dear Hiring Team at Facebook,

I'm thrilled to apply for the Junior Developer position at Facebook. With hands-on experience in React, HTML, CSS, TailwindCSS, Storybook, Git, Next.js, Laravel coupled with my passion for creating seamless, accessible, and user-friendly platforms, I'm excited about the opportunity to contribute to your mission of delivering exceptional user experiences.

In my current role as a Junior Developer at Sunderland Software City, I've:

-    Built and documented responsive front-ends using React, (Semantic) HTML, CSS, and TailwindCSS, ensuring high performance and accessibility.
-    Developed UI components with Storybook, enabling consistency and seamless collaboration across teams.
-    Followed Agile methodologies to deliver full-stack applications using tools like Git, Next.js, and Laravel, with a focus on accessibility and responsiveness.

One of my key achievements was leading the frontend development for a client project - Rank my Rental. During this project I gained hands-on experience with many aspects of the SDLC, such as requirements gathering and wireframing. I utilised Laravel's blade templates to build a seamless UI and worked closely with both the backend team and the client to assure a smooth build.

With a strong foundation in modern frontend technologies and a passion for continuous learning, I'm confident in my ability to contribute to Facebook's future success.

Thank you for considering my application. I look forward to the opportunity to discuss how I can make a positive contribution to your fantastic company.

Best regards,
Phillip Hickinbotham
