Dear Hiring Team at test,

I'm thrilled to apply for the wedwedqwd position at test. With hands-on experience with tools such as React, HTML, CSS, TailwindCSS, Git, Next.js, Laravel coupled with my passion for creating seamless, accessible, and user-friendly platforms, I'm excited about the opportunity to contribute to your mission of delivering exceptional user experiences.

In my current role as a Junior Developer at Sunderland Software City, I've:

-    Built and documented responsive front-ends using React, implementing concepts such as BEM and progressive enhancement into my workflow, ensuring scalability.
-    Developed UI components with Storybook following designs for an ecommerce platform.
-    Followed Agile methodologies working in sprints, and managing workload via kanban boards.
-    Created a monorepo in Express with various project templates for the purpose of teaching work experience students.

One of my key achievements was leading the frontend development for a client project - Rank my Rental. During this project I gained hands-on experience with many aspects of the Software Development Lifecycle, such as requirements gathering and wireframing. I utilised Laravel's blade templates to build a seamless UI and worked closely with the client during the whole development.

With a strong foundation in modern frontend technologies and a passion for continuous learning, I'm confident in my ability to contribute to test's future success.

Thank you for considering my application. I look forward to the opportunity to discuss how I can make a positive contribution to your fantastic company.

Best regards,

Phillip Hickinbotham
